## NEKTON-Iguana

Vitamin and development compound for green iguanas and herbivores and frugivore reptiles

NEKTON-Iguana contains carbohydrates, fats, vitamins, minerals, trace elements and proteins, as well as 18 essential amino acids. NEKTON-Iguana is particularly characterized by all elements that are contained in their fully unlocked form and thus available to the body immediately after it has been administered. NEKTON-Iguana ensures healthy development of the skeletal system, supports the regulated processes of molting processes, protects against nervous system disorders and preserves the functionality of the mucous membranes.

NEKTON-Iguana strengthens the body, particularly in stressful situations, e.g. during molting, when settling in with new arrivals or when being moved or transported. By administering NEKTON-Iguana, the nutritional value of normal food improves considerably; NEKTON-Iguana effectively prevents deficiency symptoms and causes a significant increase in activity. No other vitamin compound should be administered whilst using NEKTON-Iguana.
